SAFETY BARRIERS

3 Ways to Create a Safer Workplace...

Helping you protect

People | Buildings | Equipment

 **A-SAFE**

The background of the top half of the page is a photograph of a warehouse interior. It features high ceilings, industrial lighting, and rows of yellow safety railings. A worker in a high-visibility vest is operating a green and black forklift in the foreground. Another worker is visible in the background, slightly out of focus. The overall scene is brightly lit and organized.

There is an ever increasing requirement to safely protect your people, buildings and equipment. We understand that selecting the correct and most effective methods can be tricky. With the introduction of PAS 13, we can help you develop and create a safer workplace.

Emtek's unique iFlex polymer material within our range of workplace safety products allows the railings to absorb and deflect energy from an impact, then reform to the original state.

They are engineered for pedestrian walkways, machinery protection, warehousing and manufacturing applications, across all industry sectors.

Protect Your People

Emtek Workplace Safety

Our Railings and Barriers offer physical protection between people and workplace vehicles, such as fork lift trucks.

We help segregate and guide staff in areas of high risk within the workplace to ensure the safe movement of staff and goods.

<< iFlex Pedestrian 3 Rail

iFlex Swing Gate >>

Our gates help guide and control access points that provide safe movement of staff and goods within the workplace.

A photograph of an industrial facility. In the foreground, there are several yellow bollards connected by a yellow barrier. In the background, there is a set of metal stairs with yellow safety treads and silver handrails. The building has a corrugated metal roof and walls.

Vehicle impact damage to buildings, columns, walls, doorways, stairs or pipes can result in facility downtime and costly operational disruption.

Selecting the correct protection for your building can be tricky.

But we have cracked it with highly engineered, crash-tested bollards and barriers.

Protect Your Buildings

Emtek Workplace Safety

We provide robust protection to machines, equipment and physical building infrastructure, with our bollards and barriers being engineered to withstand repeated high impact strikes, preventing damage to assets and reducing repair and maintenance costs long term.

<< iFlex Bollard

<< iFlex Single Traffic Barrier+

Our bollards and barriers are quick to install and, being brightly coloured and highly visible products, they help staff identify areas of potential risk or if caution is needed.

A photograph of an industrial facility. In the background, there is a large stainless steel tank with a circular hatch and a green motor. A sign on the tank reads 'CENTRATE TANK T-1610'. In the foreground, there are several horizontal yellow protective railings. A person in a high-visibility vest is partially visible on the left side of the frame.

Prevent costly damage and downtime by protecting essential equipment, machinery and racking from vehicle impacts.

A large, bold, yellow number '3' is positioned on the right side of the page, overlapping the bottom half of the photograph and the black text box.

Repairing or replacing high-value industrial machinery, equipment and racking can be difficult and exceptionally expensive.

Protect Your Equipment

Emtek Workplace Safety

Our Equipment and Racking solutions help protect the physical structure but also help mitigate against the overall cost of damage to machinery and stock resulting from potential impacts.

Specifically designed and engineered to absorb and deflect fork lift strikes, our products can withstand heavy duty impacts with ease, ensuring your assets are protected.

<< Rack Guard

<< iFlex Double Traffic Barrier+

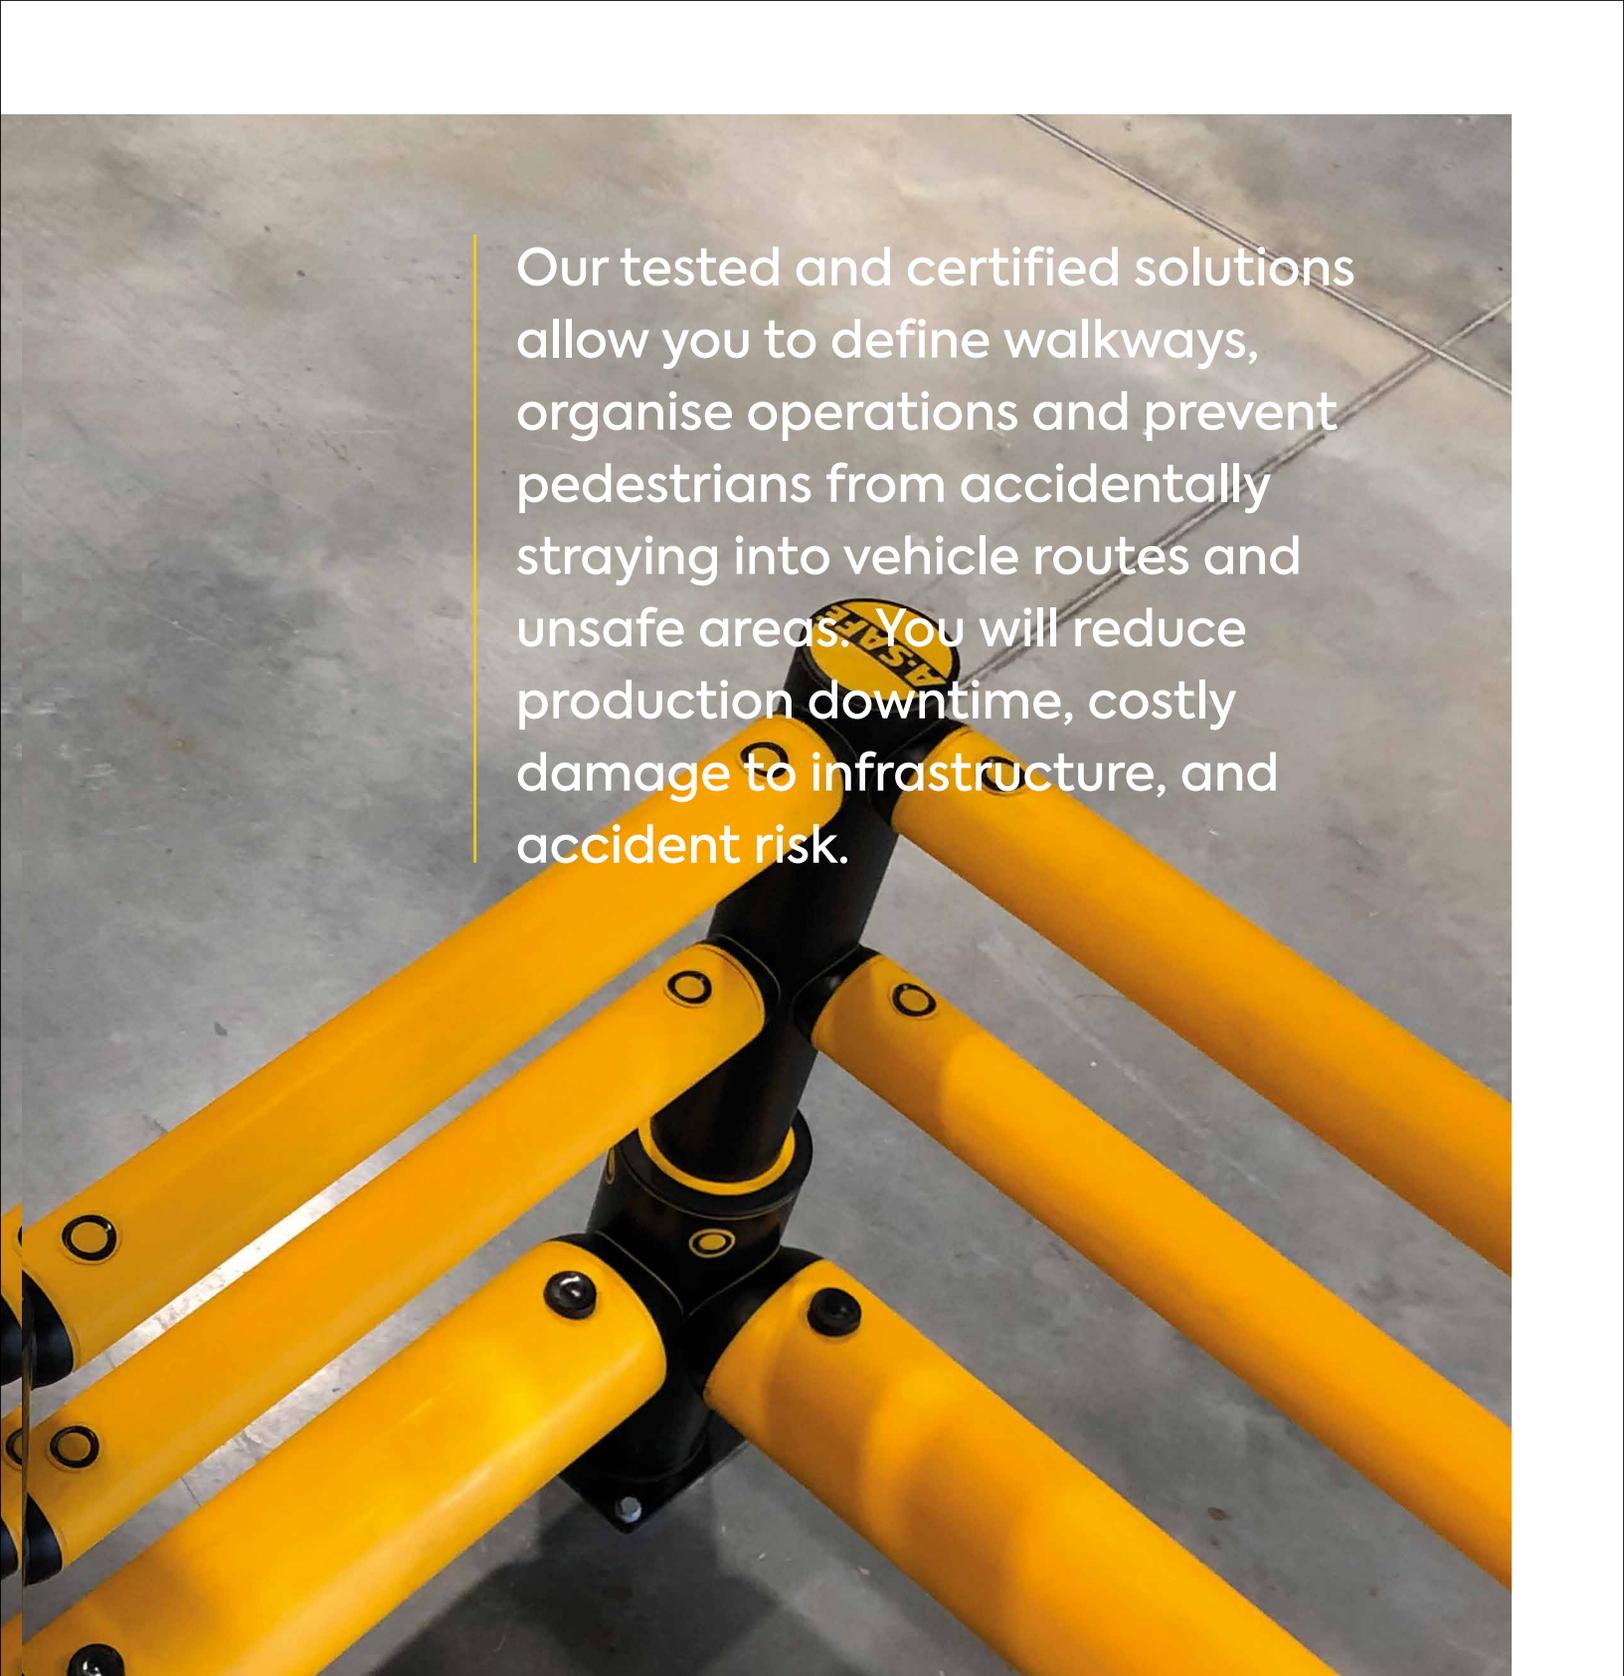

Protecting your equipment is an investment in the long-term care and upkeep of your assets.

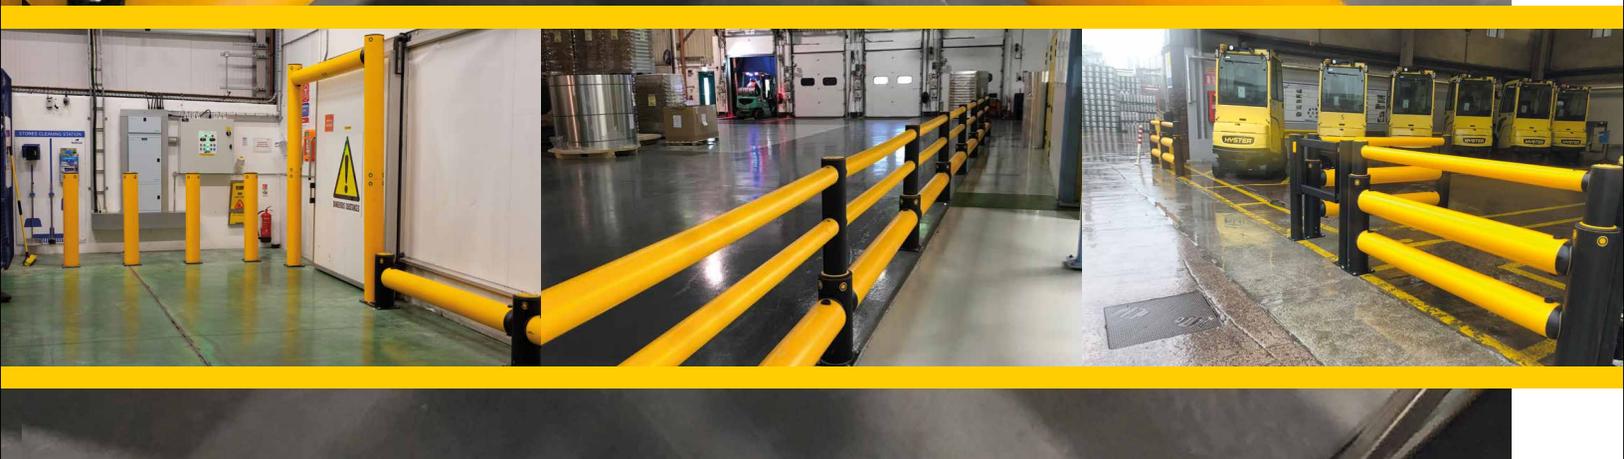

EMTEK

Helping you create a safe workplace

Our tested and certified solutions allow you to define walkways, organise operations and prevent pedestrians from accidentally straying into vehicle routes and unsafe areas. You will reduce production downtime, costly damage to infrastructure, and accident risk.

We work alongside our clients in delivering world-class safety improvements.

Our experienced teams provide a full-service approach, ensuring we are with you every step of the way.

Arrange a Site Visit

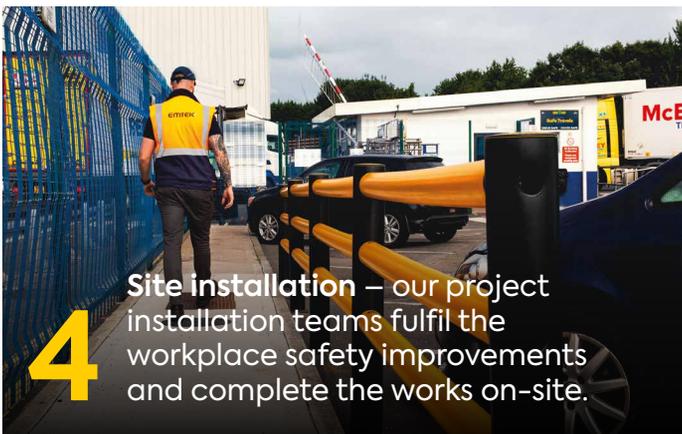

1 **Site Survey** – our field-based project managers visit and survey your facility.

2 **Engineered Solution** – our technical team calculate and design the optimum safety solution.

3 **Technical Approval** – our CAD/commercial team provide drawings and costings for client approval.

4 **Site installation** – our project installation teams fulfil the workplace safety improvements and complete the works on-site.

Our dedicated teams help support clients in creating safer workplaces across Ireland.
